NoviPad[®]

Made in Germany by OHRANA

THIS INNOVATIVE COMPUTER WRISTBAND CAN HELP PREVENT REPETITIVE STRAIN INJURY (RSI) OR OTHER ACHES AND PAINS CAUSED BY CONSTANT COMPUTER KEYBOARD AND MOUSE WORK.

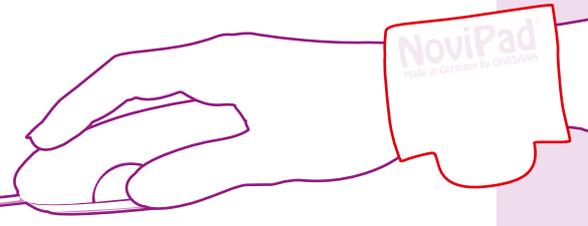

NoviPad[®] not only protects you from the new widespread complaint “RSI-Syndrom”, it also relieves existing pains and allows you to continue with your job.
NoviPad[®] fits everyone’s wrist.

So always remember:

**“FIRST PUT ON YOUR NoviPad[®]
THEN SURF THE INTERNET!”**

RSI-SYNDROM: WHEN COMPUTER KEYBOARD AND MOUSE WORK CAUSES PAIN

Constant repetitive movements at the computer – no matter if you use the keyboard or the mouse – can be the reason for the widespread complaint of the RSI-Syndrom.

The RSI-Syndrom (Repetitive Strain Injury) also referred to as “carpal tunnel syndrome” is the modern form of the tennis elbow and is caused by continuous movements such as mouse clicks and scrolls which lead to a permanent overstraining of the tendons and muscles in your hands and arms.

Even though these movements are easy physical work they can nevertheless lead to lifelong adverse health effects.

Suddenly your arm feels as heavy as lead and you experience a ‘pins & needles’ sensation.

There have been various products over the years, which have promised to alleviate the problem of RSI-

Syndrom and its symptoms.

Mousemats, gel pads or keyboard pads are only a few examples. However all of these products are usually left forgotten on the desk or elsewhere because they are too difficult to handle or simply too uncomfortable to use.

FOR THIS REASON WE HAVE DEVELOPED THE NoviPad®

NoviPad® is a computer wristband with an ergonomically formed supporting element which is always positioned where it is most needed.

NoviPad® is an effective ergonomic solution and easy to use.

Put it over your hand close to your wrist (the supporting element has to be positioned downwards). Adjust the band to your wrist and start working. Even after several hours of wearing the **NoviPad®** wristband

you still feel comfortable and relaxed. Everybody takes it for granted to fasten the seatbelt before a car ride or to put on a helmet when riding a motorbike.

In the future it should become a common practice to put on the **NoviPad®** before starting work.

If you work with a keyboard you will need two **NoviPads®**, one for each wrist to guarantee ergonomic work without complaints.

NoviPad® can not only protect you from the modern day problem of RSI-Syndrom – it also relieves your existing aches and pains and allows you to continue with your job.

So always remember:
“FIRST put on your **NoviPad®** THEN surf the internet!”

We wish you pain-free and relaxed work with your new NoviPad®!

DPMA utility model protected No.:

Note: Hook-and-loop-fasteners can cause damage to your clothes. Therefore, always close the hook-and-loop-fastener(s) during washing. Thread-ends are not a sign of quality defects. Do not pull any thread-ends but carefully cut them off. Use the ‘support ball’ on a smooth surface only. If you suffer damage despite, or because of using **NoviPad®** please consult your doctor. Current status: August 2009. Technical modifications or changings of the form, colour and/or weight are reserved within the further development.
